Need of Object Oriented Programming

Why Do We Need Object-Oriented Programming?

- Object Oriented Programming was developed because limitations were discovered in earlier approaches to programming.
- To appreciate what OOP does, we need to understand what limitations are there in earlier programming and how they differ from traditional programming languages.

POP Vs OOP

Procedure Oriented Programming	Object Oriented Programming
• In POP, program is divided into small parts called functions.	• In OOP, program is divided into parts called objects.
• POP does not have any access specifier.	• OOP has access specifiers named Public, Private, Protected, etc
• POP does not have any proper way for hiding data so it is less secure	• OOP provides Data Hiding so provides more security
• In POP, Overloading is not possible.	• In OOP, overloading is possible in the form of Function Overloading and Operator Overloading.
• In POP, most function uses Global data for sharing that can be accessed freely from function to function in the system.	• In OOP, data can not move easily from function to function, it can be kept public or private so we can control the access of data.
• Example of POP are : C, VB, FORTRAN, Pascal	• Example of OOP are : C++, JAVA, VB.NET, C#.NET.

Features of OOP

- Data binding
- Class & Object
- Message passing
- Encapsulation
- Inheritance
- Polymorphism
- Abstraction
- Method overloading
- Method overriding
- Exception handling

(Due to these all features provided by OOP it makes OOP as best programming approach)

Thank you...
